1. Key data

National R&D intensity target

“The most recent figures for Iceland on R&D intensity are 3.1% for 2009 (of which 1.25% public and 1.51% private - apart from abroad sources). The figure below shows Eurostat data, which is slightly below the data in national statistics. Comparing to other European countries, the most noticeable is Iceland’s very high public expenditure on R&D. Even if Iceland as an associated country to the European research cooperation does not form part of the Europe 2020 strategy of the European Union, certain associated countries do envisage fixing an objective for research investment and initiatives for fast growing innovative enterprises. This is the case for Iceland, which has set an R&D intensity target of 4% of GDP for 2020.”

Key indicators measuring the country’s research performance

The figure below presents key indicators measuring Iceland’s research performance against a reference group and the EU-27 average.

Figure 1: Key indicators – Iceland

2 The values refer to 2011 or the latest year available.
Stock of researchers

The table below presents the stock of researchers by Head Count (HC) and Full Time Equivalent (FTE) and in relation to the active labour force.

2. National strategies

The Science and Technology Policy Council (STPC), headed by the prime minister, is the body in charge of R&D policy at a strategic level. At an operational level, the Icelandic Centre for Research (RANNIS) reports to the Ministry of Education, Science and Culture and provides technical support to the STPC while also managing and following up the implementation of most R&D programmes. In addition, the Innovation Center Iceland, which comes under the aegis of the Ministry of Industry, Energy and Tourism, is in charge of technology development, technology transfer to companies and support to innovative businesses.

The table below presents key initiatives intended to implement the strategic objectives of training enough researchers to reach Iceland’s R&D targets, to promote attractive working conditions and to address gender and dual career issues.

<tbody>
<tr>
<td>Act on Tax Incentives (2009)</td>
<td>The Act allows innovation companies to deduct 15% annually of their annual research and development expenses from income tax liabilities. If the amount of the deduction is higher than the tax liability, the difference is reimbursed. The amount of the annual qualifying research and development expenditure is capped at ISK 50 million (some EUR 327 000) for each company and ISK 75 million (some EUR 490 000) if the service is purchased from other innovation companies.</td>
</tr>
</tbody>
</table>
| Building on Solid Foundations: Science and Technology | The Strategy calls for specific actions to encourage increased participation of industry in financing research, such as tax incentives or strong competitive funds. It recommends:  
− developing public policy to ensure open access of publicly-funded research findings; |

| **Policy for Iceland 2010 – 2012** | – evaluating the open access infrastructure necessary for coordinating databases, and accessing them and ensuring permanent reservation;  
– defining utilisation rights for data derived from public institutions and cooperative inter-sectoral research;  
– raising general awareness of the importance of open access within the research and innovation community. |

It also includes several recommended actions for increasing the level of education for people currently on the labour market. They are to:  
1. use the Graduate Research Fund more to connect universities, research institutions and companies, and connect its allocations to the Research Fund as well as other funds;  
2. place special emphasis in the Research Fund on supporting young scientists with generous grants to enable them to initiate and develop their research activities in Iceland;  
3. encourage institutions and companies to apply for funding in the ‘People’ programme within the EU’s 7th Framework Programme (Marie Curie);  
4. considerably enhance measures, such as lifelong learning on the labour market, guidance and counselling, recognition of real competencies and other solutions that may serve as opportunities and motivations for people and companies to strengthen their position;  
5. encourage people to enrol in technical and vocational studies.

### 3. Women in the research profession

**Measures supporting women researchers in top-level positions**

In 2007, the percentage of women grade A academic staff was 18.6% in Iceland compared with 13.1% among the Innovation Union reference group and an EU average of 18.7%.

### 4. Open, transparent and merit-based recruitment

**Open recruitment in institutions**

No formal barriers exist to recruiting non-nationals for permanent research and academic positions. On EURAXESS Iceland, foreign researchers can access information on vacant positions in Icelandic universities and research institutions as well as companies.

**EURAXESS Services Network**

In 2011, the number of researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector was 10 in Iceland compared with 47 among the Innovation Union reference group and an EU average of 24. Iceland’s EURAXESS webpage provides information for researchers on social security access and health insurance.

### 5. Education and training

**Measures to attract and train people to become researchers**

The Science and Technology Policy Council recommends to “encourage institutions and companies to apply for funding in the ‘People’ programme within the EU 7th Framework Programme (Marie Curie)” and “encourage people to enrol in technical and vocational studies”.

**Doctoral graduates by gender**

The table below shows doctoral graduates in Iceland by gender as a ratio of the total population cohort.

Measures to increase the quality of doctoral training
In Iceland, the Centre of Excellence Programme (2009) was established to create better cooperation and circulation of knowledge between the university, Public Research Organisation (PRO) and business sectors, such as the Centre for artificial intelligence and simulation technologies, the Centre for geothermal research or the Centre for gender/equality research7.

Skills agenda for researchers
One of the flagship activities of the Science and Technology Policy Council is “to considerably enhance measures such as lifelong learning on the labour market, guidance and counselling, recognition of real competences and other solutions that may provide further opportunities and motivations for people and companies to strengthen their position”8.

6. Working conditions
Remuneration
Salaries for researchers compare relatively well to other similar professions and are differentiated according to the scientific domain. The gap in remuneration between women and men researchers in Iceland is approximately 10%9.

‘European Charter for Researchers’ & ‘Code of Conduct for the Recruitment of Researchers’
All seven Icelandic universities have signed up to the ‘Charter & Code’:
- Agricultural University of Iceland;
- Bifröst University;
- Hólar University College;
- Iceland Academy of the Arts;
- Reykjavik University;
- University of Akureyri;
- University of Iceland.

Deloitte.
**Autonomy of institutions**

In Iceland, universities are financed and controlled by the Ministry of Education, Science and Culture. However, the Act on Public Universities (Act no. 85/2008) resulted in a new management structure for university councils in public universities, with the majority of members coming from external bodies. The Rector of each university is appointed by the Ministry of Education, Science and Culture based on a recommendation from the University Council, and for a limited period of time, normally four or five years.

These institutions (both public and private) have private boards and they have a significant degree of autonomy. They can for example decide on such matters as admission requirements, progression of students from one year to the next, certification, etc.\(^\text{10}\)

**7. Collaboration between academia and industry**

Growth Agreements, regional development contracts among national government, local business local authorities and regional development agencies, reflect the government’s emphasis on innovation policy, by encouraging R&D at regional level via clusters of local SMEs and other businesses, regional and external universities, and research organisations.

The Icelandic Student Innovation Fund aims to provide opportunities for universities, research institutions and companies to recruit graduate and postgraduate students to undertake research projects during the summer.

The main requirements for obtaining a grant are:
- the project must challenge the abilities of the student and her/his independent work methods; and
- the project must have a practical innovation value for the economy, or contribute to academic innovation in the relevant discipline.

**8. Mobility and international attractiveness**

In 2007, the percentage of non-EU doctoral candidates as a percentage of all doctoral candidates was 14.4% in Iceland compared with 14.5% among the Innovation Union reference group and an EU average of 19.4%\(^\text{11}\).

Iceland is part of the European Economic Area (EEA) which includes free movement of people. Hence, EU citizens do not need work permits to enter the Icelandic labour market. Iceland is also part of the Schengen area. However, Iceland does not participate in the Scientific Visa Package arrangements for long term admission.

The ABEL Extraordinary Chair (2009) is an initiative created as part of the project on ‘Improving student, researchers’ and artist’s mobility and cooperation between Spain, Norway, Iceland and Liechtenstein’. The programme aims to promote the temporary incorporation of high level researchers from Spain in research centres in Norway, Iceland and Liechtenstein\(^\text{12}\).

NORIA, the Nordic Research and Innovation Area, is responsible for Nordic R&D cooperation in the fields of research and innovation. This involves Nordic research funding institutions, fixed-term research programmes, Nordic Centres of Excellence, the Top-level Research Initiative (the largest joint Nordic research and innovation initiative to involve the very best agencies and institutions in the Nordic region, and promote research and innovation), grant schemes, and the coordination and planning of major infrastructure investments among the Nordic countries\(^\text{13}\).

**Portability of national grants**

Funding is always allocated to Icelandic organisations and thus, trans-border funding flows from national programmes is not allowed.
