1. Key data

National R&D intensity target

"R&D intensity in Turkey has increased progressively from 0.48% in 2000 to 0.84% in 2010. Over this period R&D intensity has experienced an average annual growth rate of 5.8%. If this trend continues Turkey will have an R&D intensity of 1.48% in 2020, a very good achievement although still below the projected European Union average for 2020.

Turkey's R&D intensity decreased from 0.85% in 2009 to 0.84% in 2010 due to a corresponding decrease in public R&D intensity from 0.51% to 0.48%. Despite the decrease in Public R&D intensity and the economic crisis, R&D expenditure in all sectors has increased and business R&D intensity has grown from 0.34% in 2009 to 0.36% in 2010. Although Turkey's business R&D intensity is still well below the EU average of 1.26%, it is involved in a positive catching up process with an average annual growth rate of 8.4%.

Turkish research and innovation are also benefitting from support from the EU budget. The main instrument is the 7th Framework Programme for Research and Development. The total number of participants in the 7th Framework Programme in Turkey is 879 (out of 5 982 applicants), receiving more than EUR 145.1 million. The success rate of participants of 14.7% is below the EU average success rate of 21.95%.

Key indicators measuring the country’s research performance

The figure below presents key indicators measuring Turkey’s performance on aspects of an open labour market for researchers against a reference group and the EU-27 average.

Figure 1: Key indicators – Turkey

Source: Deloitte
Notes: Based on the average innovation performance, Turkey belongs to the group of Modest innovators showing a performance well below that of the EU-27.

<tr>
<td>Full time equivalent (FTE) (2010)</td>
<td>64,341</td>
<td>1,589,140</td>
</tr>
</tbody>
</table>

Source: Deloitte
Data: Eurostat

The national R&D targets of Turkey for 2023, agreed by the Supreme Council of Science and Technology (BTYK) in 2011, are to:

- Increase the number of FTE researchers to 300,000 (compared with 64,341 in 2010);
- Increase the number of FTE researchers in the private sector to 180,000 (compared with 25,342 in 2010).

2. National strategies

The Turkish research system is centralised and led by the BTYK. The Scientific and Technological Research Council of Turkey (TÜBITAK) is responsible for improving the research environment in Turkey, provides scientific advice to the government and acts as the secretariat of the BTYK. The other organisation which has undertaken a similar role is the Turkish Academy of Sciences (TÜBA). Finally, the Supreme Council for Science and Technology (SCST) is the highest level policymaking and coordination body, representing all stakeholders in the policy process. The table below presents key programmes and initiatives intended to implement the strategic objectives to train enough researchers to reach Turkey’s R&D targets, to promote attractive working conditions, and to address gender and dual career issues.

Table 2: National strategies

<tr>
<td>National Science, Technology and Innovation Strategy 2011-2016 (2010)</td>
<td>The Strategy aims to create more output from existing research capacity and enhance needs-oriented research capacity by sustaining the increased performance in science, technology and innovation gained over the previous five years.</td>
</tr>
</tbody>
</table>
| National Science and Technology Human Resources Strategy and Action Plan 2011-2016 (2010) | The Strategy aims to increase the number of R&D personnel and to improve the distribution of R&D personnel with respect to professions and sector of employment. The main targets are:
  1. Increase the number of personnel in Human Resources in Science and Technology (HRST) and improving the distribution of HRST across sectors;
  2. Develop the research culture, the capabilities and experiences of researchers;
  3. Improve the work environment of the HRST;
  4. Increase the mobility of researchers;
  5. Develop the recruitment capacity of R&D personnel.

The Strategy brings together researchers, international and national academicians, private sector R&D managers and public sector lab managers and deals with the following issues: obstacles in research, solutions and international good practice, and suggestions and mechanisms to attract international researchers to Turkey. |

### Measure | Description
--- | ---

**Science and Technology Human Resources Coordination Committee (STHRCC) (2009)** | The STHRCC is responsible for improving the working environment for researchers in Turkey, such as enhancing governance in higher education institutions, raising researchers’ income, and further increasing the stock of qualified researchers as well as encouraging university-industry collaboration.

Source: Deloitte

#### 3. Women in the research profession

**Measures supporting women researchers in top-level positions**

In 2010, the percentage of women grade A academic staff was 28.1% in Turkey compared with 31.2% among the Innovation Union reference group and an EU average of 19.8%⁵.

#### 4. Open, transparent and merit-based recruitment

**Recruitment system**

According to Council of Higher Education (HEC) regulations, all open research positions in public universities must be announced on the websites of the universities at least 15 days prior to the application deadline⁶.

**EURAXESS Services Network**

In 2012, the number of researchers posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector was 0.4 in Turkey compared with 49.4 among the Innovation Union reference group and an EU average of 40.8⁷.

TÜBİTAK is the EURAXESS Network coordinator in Turkey⁸. Interested researchers can find online information (http://euraxess.tubitak.gov.tr/euraxess-turkey) regarding accommodation, day care and schooling, intellectual property rights, language courses, recognition of qualifications, salaries and taxation, social and cultural aspects, social security, pension rights and healthcare, visas and work permits.

#### 5. Education and training

**Doctoral graduates by gender**

The table below shows the number of doctoral graduates in Turkey by gender as a ratio of the total cohort population.

**Table 3: Doctoral graduates by gender**

**Funding of doctoral candidates**

TÜBİTAK has a wide range of funding programmes for both students and graduates aiming to develop their careers, skills and experience. The table below presents the scholarship schemes available for students and researchers in Turkey.

---

| Post-doctoral Research Scholarships           | – National Postdoctoral Research Scholarship programme targeting scientists who perform research in Natural Sciences, Medical Sciences, Engineering and Technological Sciences, and Social Sciences and Humanities in Turkey;  
  – International Postdoctoral Research Scholarship programme targeting scientists who perform research abroad in Natural Sciences, Medical Sciences, Social Sciences and Humanities, and Engineering and Technological Sciences. |
| Visiting Scientists Fellowship Programme       | Scientists working at universities or research centres abroad, in the fields of Natural Sciences, Medical Sciences, Engineering and Technology, and Social Sciences and Humanities at public or private institutions, are encouraged to visit Turkey by taking part in seminars, conferences, lectures, research and technological innovation. |

Source: TUBITAK website

In addition, the State Planning Organization (SPO) funds universities to develop researcher human resources development programmes which aim to train PhD graduates according to national priorities, and the needs of the universities and industry.\(^9\)

**Measures to increase the quality of doctoral training**

In Turkey, almost all universities aim to improve the quality of their education and research activities in line with the Bologna Process. Governance reform in Turkey has mainly focused on developing the ‘Quality Management Standards for HEIs’ issued by the Council of Higher Education (YOK). The YOK approved the fields of education and programmes under National Qualifications Framework in January 2011 as part of the Bologna process. Four universities were selected for the pilot implementation.\(^10\)

6. Working conditions

Remuneration
For information, see the new country profile on remuneration of researchers from the MORE2 study (forthcoming, on the EURAXESS website).

Autonomy of institutions
There are 164 Turkish universities of which 61 are privately owned. Universities employ 111,495 academic staff and the total number of students is some EUR 3.8 million.

In Turkey, every university has a budget for its personnel’s salaries and their regular activities. For the year 2011, the total budget of the universities was around EUR 5.2 billion, which approximately corresponds to 3.4% of the total state budget.\textsuperscript{11}

Career development
In Turkey, the majority of the researchers (65%) are employed in universities, while around 2,000 researchers work in one of the 100 public research institutions.\textsuperscript{12}

Social security benefits (sickness, unemployment, old-age)
Turkey has bilateral social security agreements with 21 countries. Citizens of countries which have signed social security agreement with Turkey based on the principle of reciprocity can certify that they are subject to insurance in their own country.\textsuperscript{13}

7. Collaboration between academia and industry

In Turkey, the Public Research Grant Committee (KAMAG) aims to increase the number of scientists and researchers as well as to enhance the relationships between public institutions, universities and industry.

The Engineering Research Grant Committee (MAG) funds national scientists in the fields of mechanical, chemical, metallurgical, civil, industrial, textile and mining engineering, and architecture in order to generate information and technology and transform the results into services and/or products for public use in connection with universal developments and national priorities.

In addition, the Technology and Innovation Funding Programmes Directorate (TEYDEB) facilitates cooperation between industry and academia to encourage active involvement in technology development and innovation activities. There are currently five technology groups in TEYDEB to improve collaboration activities between academia and the business sector:

1. Machinery and Manufacturing;
2. Electrical and Electronics;
3. Materials, Metallurgical and Chemical;
4. Biotechnology, Agricultural, Environmental and Food;
5. Information Technologies.

8. Mobility and international attractiveness

In 2010, non-EU doctoral candidates were 2.5% of all doctoral candidates in Turkey compared with 2.2% among the Innovation Union reference group and an EU average of 20.0%.\textsuperscript{14}

The Turkish government is developing bilateral and multilateral agreements for research promotion through TÜBİTAK. The International Cooperation Department is responsible for the management of TÜBİTAK’s international programmes:

\textsuperscript{11} Ibid.
\textsuperscript{12} Ibid.
\textsuperscript{13} Overall progress in EPR implementation, December 2009, Annex II
\textsuperscript{14} See Figure 1 “Key indicators – Turkey”.

Deloitte.
− bilateral cooperation with a variety of countries at intergovernmental or inter-institutional level, such as common research projects, financial support for several different types of activities i.e. common scientific meetings, exchange of scientists, scientific visits, etc;
− cooperation with Regional and International Organisations, such as COST (European Cooperation in the field of Scientific and Technical Research), ESA (European Space Agency), ESF (European Science Foundation) and EMBC (European Molecular Biology Conference), and regional organisations, such as Organization of the Black Sea Economic Cooperation and international organisations like NATO, OECD and UNESCO. As part of these collaborations, Turkish scientists participate in events, develop science and technology policies, support and conduct research and development activities, and play a leading role in the creation of a science and technology culture with the aim of improving the competitive power and prosperity of the country;
− cooperation with the European Union (EU), such as the 7th Framework Programme (2007-2013).

**Inward mobility (funding)**

In the past, foreign researchers conducting projects funded by TÜBİTAK were at a disadvantage compared to Turkish researchers, as they were not entitled to obtain the ‘Project Incentive Bonus’. The relevant regulation was recently amended.

In addition, the [www.workpermit.gov.tr](http://www.workpermit.gov.tr) website provides extensive information on the procedures for receiving a work permit.\(^{15}\)
